¹⁾ Seal for 10 valves

Description

It relieves the inlet pressure from either one of the supply lines and it protects the motor from shocks or pressure surges induced by changes in direction or by sudden stops. The dual relief is of the cross over type, and exhausted oil is transferred to the other line (from V1 into V2 and vice-versa), without the necessity of a separate tank line: this feature also prevents cavitation when used in conjunction with closed centre directional valve.
