

Duplex filter with filter element according to DIN 24550

Type 40 FLDN 0400 to 1001;
40 FLD 0120 to 0274

RE 51408

Edition: 2019-12

Replaces: 02.09

- Size **according to DIN 24550**: 0400 to 1001
- Additional sizes: 0120 to 0274
- Nominal pressure: 40 bar [580 psi]
- Connection up to SAE 4" 3000 psi
- Operating temperature -10 °C ... +100°C [14 °F ... 212 °F]

Features

Duplex filters are used in hydraulic systems for separating solid materials from fluids and lubricating oils. They are intended for installation into pipelines and allow for the exchange of the filter element without operational interruption.

They distinguish themselves by the following:

- Filters for inline installation, switchable
- Special highly efficient filter materials
- Filtration of very fine particles and high dirt holding capacity across a broad pressure differential range
- Optionally equipped with mechanical optical maintenance indicator with memory function
- Available as an option with various optional electronic switching elements, modular design
- Optional bypass valve integrated in the filter housing
- Switch-over via bank segment change-over
- Inlet above, outlet below

Mating connectors

for electronic switching element with round plug-in connection M12x1

Mating connector suitable for K24 4-pole, M12x1 with screw connection, cable gland Pg9.

Material no. R900031155

Mating connector suitable for K24-3m 4-pole, M12x1 with potted-in PVC cable, 3 m long.

Line cross-section: 4 x 0.34 mm²

Core marking: 1 brown 2 white
3 blue 4 black

Material no. R900064381

For more round plug-in connections and technical data refer to data sheet 08006.

Order example:

Duplex filter with mechanical optical maintenance indicator for $p_{nominal} = 40 \text{ bar [580 psi]}$ with bypass valve, size 0400, with filter element 3 μm and electronic switching element M12x1 with one switching point.

Filter with mech.

Filter design

Easy selection of the filter size is made possible by the FilterSelect online tool. The filter can be designed using the operating pressure, flow and fluid system parameters. The required filter rating is based on the application, the sensitivity to contamination of the components and the environmental conditions.

The program leads you through the menu on a step-by-step basis.

A documentation of the filter selection can finally be created in the form of a PDF file. This file contains the entered parameters, the designed filter with material number including spare parts, and the pressure loss curves.

Circuit diagram drawn in plugged condition at temperature > 30 °C [86 °F] (operating condition)

Function, section: NG0400 ... 0630 / 0120

The 40FLDK(N) duplex filter is suitable for inline installation. It basically consists of two filter housings (2) with one switch-over fitting (1), two filter covers (3), two filter elements (4) as well as mechanical optical maintenance indicator (8).

Via the inlet, the hydraulic fluid reaches the filter element (4) where it is cleaned. The dirt particles filtered out collect in the filter element (4). Via the outlet, the filtered fluid enters the hydraulic circuit.

Switching between the two filter housings is carried out by means of the switching lever.

The filter housing and all connection elements are designed so that pressure peaks – as they may occur e.g. in case of abrupt opening of large control valves due to the accelerated fluid quantity – can be securely absorbed.

Via the bleed screws (standard) and/or bleed valves – amending ordering code E – (7) the filter side to be maintained can be bled.

The sizes 0400-0630 / 0120 are equipped with mounting brackets. The standard pressure equalization line (10) serves to simplify the filling and bleeding in a filter element exchange.

By default, the filter is equipped with mechanical optical maintenance indicator (8). The electronic switching element (9) which has to be ordered separately is attached to the mechanical optical maintenance indicator (8) and held by means of a locking ring.

The electronic switching elements with 1 or 2 switching points are connected via a mating connector according to IEC-60947-5-2 or via a cable connection according to EN17301-803.

Type 40 FLDN 0630

- 5 Draining dirt side
- 6 Draining clean side

Function, section: NG1001 / 0201 ... 0271

The 40 FLD(N) duplex filter is suitable for inline installation. It basically consists of two filter housings (2) with one switch-over fitting (1), two threaded filter heads (3), two filter elements (4) as well as mechanical optical maintenance indicator (8).

Via the inlet, the hydraulic fluid reaches the filter element (4) where it is cleaned. The filtered dirt particles collect in the filter element (4) and the filtered fluid enters the hydraulic circuit via the outlet.

Switching between the two filter housings is carried out by means of the switching lever. The rotation limitation must be placed at the stop position.

The filter housing and all connection elements are designed so that pressure peaks – as they may occur e.g. in case of abrupt opening of large control valves due to the accelerated fluid quantity – can be securely absorbed.

Via the bleed screws (standard) and/or bleed valves – amending ordering code E – (7) the filter side to be maintained can be bled.

The sizes 1001 / 0201-0271 are equipped with a floor mount. The standard pressure equalization line (10) serves to simplify the filling and bleeding in a filter element exchange.

By default, the filter is equipped with mechanical optical maintenance indicator (8). The electronic switching element (9) which has to be ordered separately is attached to the mechanical optical maintenance indicator (8) and held by means of a locking ring.

The electronic switching elements with 1 or 2 switching points are connected via a mating connector according to IEC-60947-5-2 or via a cable connection according to EN17301-803.

Type 40 FLDN 1001

- 5 Draining dirt side
- 6 Draining clean side

**Important information on hydraulic fluids!**

- ▶ For more information and data on the use of other hydraulic fluids, please refer to data sheet 90220 or contact us!
- ▶ **Flame-resistant – containing water:** Due to possible chemical reactions with materials or surface coatings of machine and system components, the service life with these hydraulic fluids

Notice:
with NG1001 ... 0274
ordering code
“Supplementary
information = -0066”
mandatory

may be less than expected. Filter materials made of filter paper (cellulose) may not be used, filter elements with glass fiber filter material or wire mesh have to be used instead.

- ▶ **Bio-degradable:** If filter materials made of filter paper are used, the filter life may be shorter than expected due to material incompatibility and swelling.

Maintenance indicator (dimensions in mm [inch])

Pressure differential indicator with mounted switching element M12x1

Pressure differential indicator with mounted switching element EN-175301-803

- 1 Mechanical optical maintenance indicator;
max. tightening torque $M_{A \max} = 50 \text{ Nm}$ [36.88 lb-ft]
- 2 Switching element with locking ring for electrical maintenance indicator (rotatable by 360°); round plug-in connection M12x1, 4-pole
- 3 Switching element with locking ring for electrical maintenance indicator (rotatable by 360°); rectangular plug-in connection EN175301-803
- 4 Housing with three LEDs: 24 V =
Green: stand-by
Yellow: switching point 75 %
red: switching point 100 %
- 5 Visual indicator with memory function
- 6 Locking ring DIN 471-16x1, **material no. R900003923**
- 7 Name plate

 **Notices:** Representation contains mechanical optical maintenance indicator (1) and electronic switching element (2) (3).

Assembly, commissioning, maintenance

Assembly

- ▶ The max. operating pressure of the system must not exceed the max. admissible operating pressure of the filter (see type plate).
- ▶ In the assembly, depending upon the dimensions, you have to distinguish between floor mounting and wall mounting.
- ▶ During assembly of the filter the flow direction (direction arrows) and the required servicing height of the filter element (see chapter "Dimensions") are to be considered.
- ▶ The filter covers may not be used as lifting points.
- ▶ Perfect filter function is only guaranteed when mounted with the filter cover vertically upward.
- ▶ The maintenance indicator must be arranged so it is easily viewed in operation.
- ▶ Filters with foot mount or wall mount should be securely using proper fasteners.
- ▶ Ensure that the system is assembled without tension stress.
- ▶ Remove the plastic plugs from the filter inlet and outlet.
- ▶ The optional electronic maintenance indicator is connected via the electronic switching element with one or two switching points, which is attached to the mechanical optical maintenance indicator and held by means of the locking ring.

Commissioning

- ▶ Bring the switching lever into central position in order to fill both filter sides.
- ▶ Commission the system.
- ▶ Bleed filter by opening the bleed screws or bleed valves, close when operating liquid escapes.
- ▶ Switch the filter into the operating position; to do so, switch the switching lever to one of the two end positions. (See information on the indicator disc on the switch housing) The switch-over lever is on the filter side that is in operation.
- ▶ Close pressure equalization line.

Maintenance

- ▶ If at operating temperature, the red indicator pin reaches out of the mechanical optical maintenance indicator and/or if the electronic switching element opens/closes the circuit, the filter element is contaminated and needs to be replaced or cleaned respectively.
- ▶ The material number of the corresponding replacement filter element is indicated on the name plate of the complete filter. It must correspond to the material number on the filter element.
- ▶ The switch-over lever is over the filter side that is in operation. (See notice on the indicator disc of the switch housing.)
- ▶ Open the pressure compensation at the ball valve.
- ▶ Switch the filter using the switch-over lever.
- ▶ Close the pressure compensation at the ball valve.
- ▶ Open the bleed screw or bleed valve at the decommissioned filter side in order to reduce the pressure.
- ▶ Via the drain screw, the oil on the dirt side can be drained.
- ▶ Remove the filter cover of the filter side that is not in operation.
- ▶ Remove the filter element from the spigot by rotating it slightly.
- ▶ Clean the filter components, if necessary.
- ▶ Check the seals for damage and replace them, if necessary. For suitable seal kits refer to chapter "Spare parts".
- ▶ Filter elements made of wire mesh can be cleaned. For detailed cleaning instructions refer to data sheet 51420.
- ▶ Install the new or cleaned filter element on the spigot again by slightly rotating it.
- ▶ The filter is to be assembled in reverse order.
- ▶ To fill the maintained filter side, open the pressure equalization line.
- ▶ The filter is bled via the bleed screw or the bleed valve which is still open.
- ▶ After fluid escapes, close the bleed screw or the bleed valve again
- ▶ Ensure correct position of the switch-over lever end position.
- ▶ Close pressure equalization line.

Assembly, commissioning, maintenance

WARNING!

- | | |
|---|---|
| <ul style="list-style-type: none">▶ Assemble and disassemble only with depressurized system!▶ Filter is under pressure!▶ Remove the filter cover only if it is depressurized!▶ Do not exchange the maintenance indicator while the filter is under pressure! | <ul style="list-style-type: none">▶ Do not operate the switching lever and the pressure equalization valve during the filter element exchange.▶ When disassembling the filter, it has to be ensured that the system is depressurized.▶ If the flow direction is not considered during assembly, the filter element will be destroyed. Particles will enter the system and damage the downstream components. |
|---|---|

Notices:

- | | |
|--|---|
| <ul style="list-style-type: none">▶ All maintenance of the filter should be performed by trained specialists.▶ Proper function and safety are only guaranteed if original Bosch Rexroth filter elements and spare parts are used. | <ul style="list-style-type: none">▶ Warranty becomes void if the delivered item is changed by the ordering party or third parties or improperly mounted, installed, maintained, repaired, used or exposed to environmental condition that do not comply with the installation conditions. |
|--|---|

Directives and standardization

Product validation

Rexroth filters, the filter elements built into them and filter accessories are tested and quality-monitored according to different ISO test standards:

Pressure pulse test	ISO 10771:2015-08
Filtration performance test (multipass test)	ISO 16889:2008-06
Δp (pressure loss) characteristic curves	ISO 3968:2001-12
Compatibility with hydraulic fluid	ISO 2943:1998-11
Collapse pressure test	ISO 2941:2009-04

The development, manufacture and assembly of Rexroth industrial filters and Rexroth filter elements is carried out within the framework of a certified quality management system in accordance with ISO 9001:2000.

Classification according to the Pressure Equipment Directive

The duplex filters for hydraulic applications according to 51408 are pressure holding equipment according to article 1, section 2.1.4 of the Pressure Equipment Directive 97/23/EC (PED). However, based on the exception in article 1, section 3.6 of the PED, hydraulic filters are

exempt from the PED if they are not classified higher than category I (guideline 1/19).

The fluids from the chapter “Compatibility with approved pressure fluids” were considered for the classification.

They do not receive a CE mark.

Use in potentially explosive areas according to directive 94/9/EC (ATEX)

The duplex filters according to 51408 are not equipment or components in the sense of directive 94/9/EC and are not provided with a CE mark. It has been proven with the ignition risk analysis that these inline filters do not have own ignition sources acc. to DIN EN 13463-1:2009.

According to DIN EN 60079-11:2012, electronic maintenance indicators with a switching point:

WE-1SP-M12x1 **R928028409**

WE-1SP-EN175301-803 **R928036318**

are simple, electronic operating equipment that do not have an own voltage source. This simple, electronic operat-

ing equipment may – according to DIN EN 60079-14:2012 – in intrinsically safe electric circuits (Ex ib) be used in systems without marking and certification.

The duplex filters and the electronic maintenance indicators described here can be used for the following explosive areas:

	Zone suitability	
Gas	1	2
Dust	21	22

Complete filter with mech./opt. Maintenance indicator				
Use/assignment			Gas 2G	Dust 2D
Assignment			Ex II 2G c IIC TX	Ex II 2D c IIC TX
Conductivity of the medium	pS/m	min	300	
Dust accumulation		max	–	0.5 mm

Electronic switching element in the intrinsically safe electric circuit				
Use/assignment			Gas 2G	Dust 2D
Assignment			Ex II 2G Ex ib IIB T4 Gb	Ex II 2D Ex ib IIIC T100 °C Db
Perm. intrinsically safe electric circuits			Ex ib IIC, Ex ic IIC	Ex ib IIIC
Technical data			Values only for intrinsically safe electric circuit	
Switching voltage	Ui	max	150 V AC/DC	
Switching current	Ii	max	1.0 A	
Switching power	Pi	max	1.3 W T4 T_{\max} 40 °C	750 mW T_{\max} 40 °C
		max	1.0 W T4 T_{\max} 80 °C	550 mW T_{\max} 100 °C
Surface temperature ¹⁾		max	–	100 °C
Inner capacity Ci			negligible	
Inner inductivity Li			negligible	
Dust accumulation			max	0.5 mm

¹⁾ The temperature depends on the temperature of the medium in the filter and must not exceed the value specified here.

Directives and standardization

Possible circuit according to DIN EN 60079-14

Related operating media

WARNING!

- ▶ Explosion hazard due to high temperature! The temperature depends on the temperature of the medium in the hydraulic circuit and must not exceed the value specified here. Measures are to be taken so that in the potentially explosive area, the max. admissible ignition temperature is not exceeded.
- ▶ When using the duplex filters according to 51408 in explosive areas, sufficient potential equalization has to be ensured. The filter is preferably to be grounded via the mounting screws. It has to be noted in this connection that painted and oxidized protective layers are not electrically conductive.
- ▶ During filter element exchanges, the packaging material is to be removed from the replacement element outside the explosive area

Notices:

- ▶ All maintenance of the filter should be performed by trained specialists, instruction by the machine end-user acc. to DIRECTIVE 1999/92/EC appendix II, section 1.1
- ▶ Functional and safety warranty only applicable when using genuine Rexroth spare parts
